

Anticipation grows for Myplant & Garden Middle East

Myplant & Garden Middle East is rapidly becoming a platform for green industry professionals eager to expand their business networks in one of the world's most dynamic and fast-growing regions. It offers an opportunity to tap into a market shaped by rapid urbanisation, sustainability agendas, and government-driven green initiatives.

Growing international interest in a greener gulf

There is a notable uptick in interest from real estate developers, urban infrastructure planners, investors, and retail leaders across the UAE, Saudi Arabia, Qatar, and other Gulf Cooperation Council (GCC) nations. These players are leading the transformation toward sustainable and liveable urban spaces, aligned with national development visions such as the UAE Green Agenda 2030, Abu Dhabi Vision 2030, and Dubai Urban Master Plan 2040.

Myplant & Garden Middle East features six core exhibition areas: landscape architecture and urban furniture, nurseries and floriculture, pots and outdoor décor, greenhouse technologies, machinery, and irrigation systems, floral design and decorations, and technical services and ICT for green infrastructure.

International exhibitors specialising in the design, development, and maintenance of both public and private green spaces are increasingly drawn to the event to source suppliers and forge commercial alliances.

A gateway to the GCC Green Market

Exhibitors participating in Myplant & Garden Middle East will benefit from targeted exposure to selected buyers and stakeholders from the UAE, wider GCC region, Africa, and Asia. In collaboration with ITA – Italian Trade Agency, specialised promotion agencies, and Myplant & Garden's organisational office, the fair will host prominent developers, architectural studios, and influential figures from global interior and landscape design circles.

The Gulf's megaproject sector alone is estimated to represent an investment value of over USD 777 billion, creating vast opportunities for companies offering sustainable landscaping and innovative green technologies. Government mandates for green urbanism are driving demand for products and services that support biodiversity, improve air quality, and enhance quality of life.

Key players shaping a regional #GreenRenaissance

Under the theme #GreenRenaissanceUAE, Myplant & Garden Middle East aims to unite the green supply chain with the region's ambitious environmental and developmental roadmaps. The exhibition is designed to be a strategic platform for investment, partnership building, and knowledge exchange across the sector.

Exhibitors

Tanseeq Investment Group confirmed its partnership at the latest edition of Myplant & Garden in Milan. The group is one of the UAE's foremost landscape contractors, with a strong presence across the GCC. Its portfolio includes large-scale residential and public projects, and it is a leading importer/exporter of horticultural products through its own nurseries and garden centres.

Desert Group, Gold Sponsor of the event, is a regional pioneer in integrated landscaping solutions. With over 6,000 completed projects and a team of 5,000 professionals, the company has delivered landmark developments including Jumeirah Golf Estates, Dubai Hills, Al Ruwaya Golf Course, and The Oberoi Beach Resort Al Zorah.

Planters Group, the largest full-service landscape design company in the Gulf, specializes in both exterior and interior green environments. Its prestigious client list includes Apple, Emaar, Grand Hyatt, and Emirates, and its expertise ranges from vertical gardens to bespoke plant installations.

Myplant & Garden Middle East: The full scope of the green industry

Myplant & Garden Middle East is conceived to represent the complete horticultural value chain — from nurseries and plant production to smart irrigation, sustainable urban design, logistics, and the maintenance of sports and public green spaces.

The six exhibition sectors highlight urban and landscape design, plant nurseries and floriculture, containers, pots, and furnishings, greenhouse and irrigation technologies, floral art and installations, as well as support services and digital platforms.

UAE: Leading the green renaissance

In cities like Dubai, Abu Dhabi, and Sharjah, green infrastructure has become a cornerstone of future city planning. Driven by national visions and climate strategies such as Net Zero 2050, these efforts aim to improve urban resilience, promote biodiversity, and enhance liveability.

For example, Abu Dhabi's "Sustainable Communities" initiative mandates greening in residential developments. The Dubai Urban Master Plan 2040 includes a 105% expansion of green and public spaces. Dubai South, a 145 km² development, incorporates green corridors linking parks, housing, and workplaces. Additionally, Masdar City and Expo City Dubai stand as international models for sustainable urbanism.

Green principles are also becoming essential in the hospitality sector, with brands such as Jumeirah Group, Emaar Hospitality, and Kerzner International integrating landscaping and nature-based solutions as core design elements. This ranges from eco-lodges in the Rub' al Khali desert to wellness resorts on Saadiyat Island.

"Myplant & Garden Middle East aims to become the premier event for the ornamental horticulture industry in the region," says Valeria Randazzo, CEO of Myplant & Garden. "The increasing participation of industry leaders and the keen interest from Gulf countries reflect the urgency and relevance of a sustainable development agenda. Our mission is to create a hub for innovation, collaboration, and meaningful change — a true catalyst for the Green Renaissance unfolding across the Middle East."
